**MINIATURE CIRCUIT BREAKERS (IEC / EN 60898-1), (IEC / EN 60947-2)**

Federal miniature circuit breakers protect the electrical circuit they are connected to against over current and short circuits. They allow easy open-close of the circuit. Miniature circuit breakers are manufactured with 1,2,3,4 poles and 1 phase + neutral, 3 phase + neutral from 0,5A to 125A in accordance **CE**. There are three separate types as B, C, and D. In case of a short circuit, B types open the circuit at 3 or 5 times more than nominal current, C types open the circuit at 5 or 10 times more than the nominal current and D types open the circuit at 10 or 20 times more than the nominal current. Miniature circuit breakers with 2, 3, 4 poles disable the device they are connected to, thanks to their mechanisms in case of a failure in any phase.

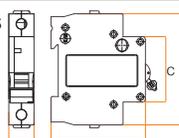

**B Curve:** Used in illumination of houses, plugs and control circuit.

**C / D Curve:** Used in inductive loads like transformers, several fluorescent lamps etc.

The device opening the current is enabled by lifting the lever in case of any failure. Lever-free opening mechanism shall open the current again as the failure continues. Federal miniature circuit breakers open the circuit in a very short time in case of a short circuit current are limited. It provides ease in assembly thanks to the desing of connection terminals, accidentally touches

are eliminated. Federal miniature circuit breakers resist an ambient temperature of 55°C and resist a relative humidity of 95%. 25mm<sup>2</sup> cable can be connected to specially-designed cable inputs.

**\*At DC voltage**

- Overload protection (thermal) characteristic is same as AC voltage.
  - Short circuit protection (magnetic) characteristic is %40 higher than AC voltage.
- Circuit Breakers produced for AC system, work at DC 60V voltage per pole.

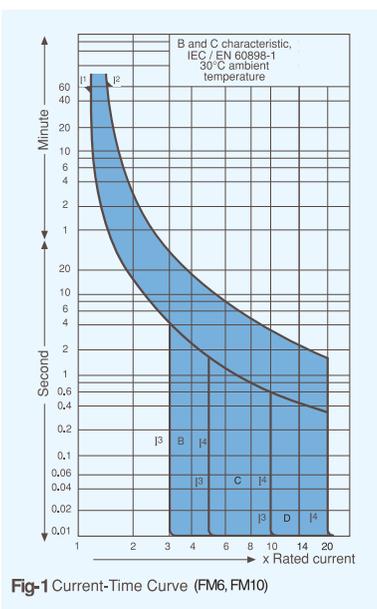

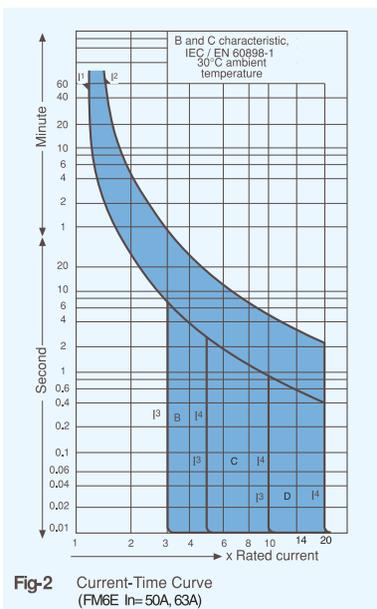

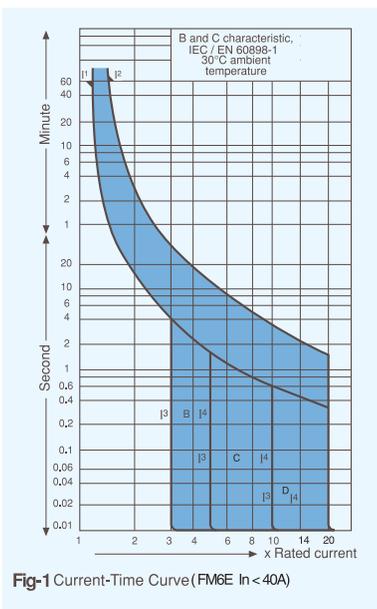

**Temperature Effect in Automatic Fuses:**

The thermal overload protection characteristics change due to the temperature of the automatic fuses. From the calibrated temperature it will trip earlier than its nominal value if it operates in a warmer environment. If you work in a cooler environment it opens later. Federal automatic fuses are calibrated to 30 ° C as standard. Different on request calibration can also be performed for ambient temperatures. The table below shows the calibrated automatic fuse according to 30 ° C operating currents are given for different ambient temperatures. 40 A calibrated to ambient temperature of 30 ° C the operating current of the fuse at 50 ° C is found on the table 36A.

In (A)	Compensation Factor According to Ambient Temperature (k) (Calibration Temperature 30°C)						
	10°C	20°C	30°C	40°C	50°C	55°C	60°C
0,5	0,6	0,5	0,5	0,5	0,5	0,4	0,4
1	1,1	1,1	1,0	1,0	0,9	0,9	0,9
2	2,2	2,1	2,0	1,9	1,8	1,8	1,7
3	3,3	3,2	3,0	2,9	2,7	2,6	2,6
4	4,4	4,2	4,0	3,8	3,6	3,5	3,4
6	6,6	6,3	6,0	5,7	5,4	5,3	5,1
10	11,0	10,5	10,0	9,5	9,0	8,8	8,5
16	17,6	16,8	16,0	15,2	14,4	14,0	13,6
20	22,0	21,0	20,0	19,0	18,0	17,5	17,0
25	27,5	26,3	25,0	23,8	22,5	21,9	21,3
32	35,2	33,6	32,0	30,4	28,8	28,0	27,2
40	44,0	42,0	40,0	38,0	36,0	35,0	34,0
50	55,0	52,5	50,0	47,5	45,0	43,8	42,5
63	69,3	66,2	63,0	59,9	56,7	55,1	53,6
80	88,0	84,0	80,0	76,0	72,0	70,0	68,0
100	110,0	105,0	100,0	95,0	90,0	87,5	85,0
125	137,5	131,3	125,0	118,8	112,5	109,4	106,3

Since a large number of auto fuses running side by side in a box will affect each other, it will fall even further. In this case, the rated current of the auto-fuse is multiplied by 0.8 to obtain the new rated current. For example, if the 25A automatic fuse runs side-by-side with many fuses in a 40 ° C environment, the current is found to be 23.8 x 0.8 = 19 A.

Miniature Circuit Breakers protect electrical circuits against overload and short-circuit current. They provide ON-OFF switching easily. 6, 10 kA Federal Miniature Circuit Breaker is manufactured between the ranges 80A - 125A and 1, 2, 3, 4 poles. It is manufactured in accordance with IEC 60947-2 standard and CE norms. In the event of failure on any phase, 1, 2, 3, 4 poles circuit breakers obtain to not being put into use of device.

**MINIATURE CIRCUIT BREAKERS BOXES**

- General Technical Specifications**
- Material: Thermoplastic
  - Standard color: White
  - Recommended assembly temperature: before -15°C and + 60°C
  - Field of use: Flush mounted and surface mounted installations

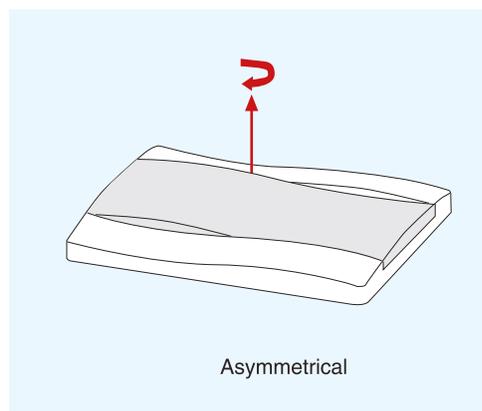

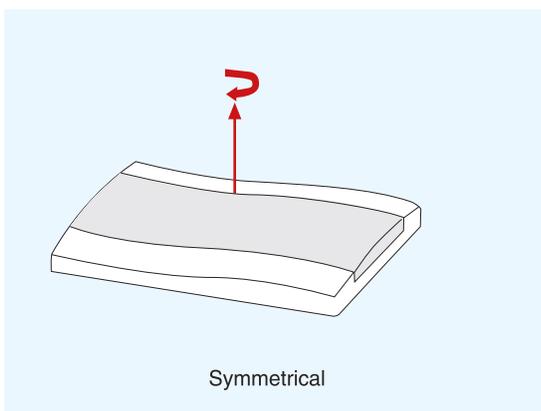

- Circuit labels, ground busbars, automated assembly rail are present.
- Model of 1, 2, 3, 4, 6, 8, 9, 12, 18, 24
- Cover opening towards right or left.
- High-strength cover.
- Opening direction of covers may be reversed to right or left.

**PLASTIC BOXES (IEC / EN 60670-1)**

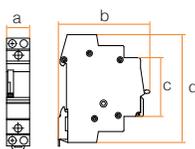

Technical Specification

2NA	230	110	16A-250V
1NA+1NK	230	110	16A-250V
Dimensions 	a mm		18
	b mm		71
	c mm		45,6
	d mm		83,75

Impulse Current Breakers are used to control lightning from two or more points. Traditionally, the need for controlling lightning circuits in larger areas from various points was met by using wavy-key system. Limited number of keys, high material and installation costs creates a need for more economical and comfortable solutions. The product were developed to overcome this deficiency and presented to the end-users. According to the changing position principle of contacts when switched as the number of connection terminals will be the same regardless of the number of keys, 80% of the time during cable pulling and 50% savings in cable length is achieved.

**Specifications of Impulse Current Breaker:**

- 24V-48V-230V coil voltage
- The modularity
- Rail mounting feature
- Auxiliary contacts can be added

**Connection Capacity:**

- Rigid Conductor 10mm<sup>2</sup>
- Flexible Conductor 6mm<sup>2</sup>

**Description:**

For control of lighting circuits in private buildings, small industry buildings. Latching relays operate when pulsed by a signal voltage. The pulse can be provided via a push button or switch. The first impulse sets the relay into its set (opposite) state, the next impulse returns it to its reset (original) state.

① 2P Series: 500V, 3P Series: 750, 40P Series: 1000V  
 ② Dimension specified in "a" line, is increasing according to number of poles. (2P=a x 2, 3P=a x 3, 4P=a x 4)

On-off switches without thermal and magnetic protection feature are called isolators. Federal switches are manufactured in accordance with TS EN 60947-3 standard and **CE** norms from 40A to 125A with 1, 2, 3 and 4 poles. Thanks to their 2, 3 and 4 poles switch lever mechanisms, they break the system simultaneously. They can be used safely with distribution and control elements.

**INSTALLATION CONTACTORS (IEC / EN 60947-4-1), (IEC / EN 61095)**

TYPE		FCR2020	FCR4020	FCR6320	FCR4040	FCR6340

**Installation Contactors**

**Area of Usage**

- Small engines
- At residential and office, at the power control of the last distribution circuit.
- Lighting
- Heating, pumps and furnaces
- Water heating for home using

Impact voltages and currents, which occur in illumination applications from time to time, may force the contactor.

It has been classified in terms of type behavior and closing-breaking operation for selection. While contactor is selected for illumination circuits, important factors are bulb type, connection, whether there is compensation or not, start-up and operating current and power factor. While the contactor is loaded up to 15 times of the lamp rated current during closing in filament lamps, breaking current is equal to rated current.

Compensation is very important in discharge and florescent lamps. In high pressure mercury vapor lamps, a current occurs at two times of the operating current during pre-heating period (approximately 5 minutes). This regime period is about 10 minutes in halogen lamps and sodium vapor lamps.

**Technical Features:**

Type	Using Category	Insulation Voltage U <sub>i</sub> (V)	Operating Voltage U <sub>e</sub> (V~)	Rated of Heat Current (A)	Ie (A)	Control Power (kW)
